#### 11 | Emergency Power Supply

When the battery power is lower than 4.8v, the voice guide will notify with a message. Battery replacement will need to be done.

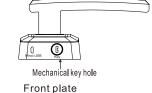

(Please use good alkaline batteries and do not mix new with old batteries)

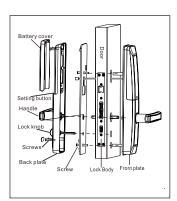

The system will shut down when batteries are empty. To revive the system, connect a micro USB power connector to the emergency power supply located at the bottom of the front plate.

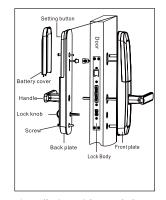

# 12 Unlock by Emergency Mechanical Key

Stick the key in the key hole, rotate 180° to the right, then pull the handle down to open the door.

Installation with back panel and back plate

Installation with metal plate fixing on the back plate
